Chapter 2 — The Sell Page (Point of Sale)

Chapter 3 — Selling Items

Chapter 4 — Sales Log and Undoing a Sale

Chapter 5 — Your Daily Workflow: Tips

Chapter 6 — Quick Reference

About This Guide

This guide is written for **till operators** who use QMark every day to sell items in the school shop. It explains only the parts of the program you need for your daily work: logging in, selling items, correcting mistakes, and the everyday screen you work on.

Roles in QMark. The program has three roles: **Clerk** (seller), **Admin**, and **SuperAdmin**. As a Clerk you can *sell items, view the sales log and undo sales*. Everything else (adding items, reports, user accounts, settings) is done by your administrator — if you see an “Access Denied” message, that feature simply is not available to your role.

Chapter 1 — Logging In and Out

1.1 Starting QMark

1. Start the program by double-clicking the `QMark` file (or `QMark.exe` on Windows).
2. The window opens **maximized** — it automatically fits your screen, from 800×600 all the way up to full-HD monitors.
3. The program remembers its language. The default is Polish; your administrator can change it to English in **Ustawienia** (Settings).

1.2 The Login Screen

When QMark starts you see the login screen with the **Username** and **Password** fields.

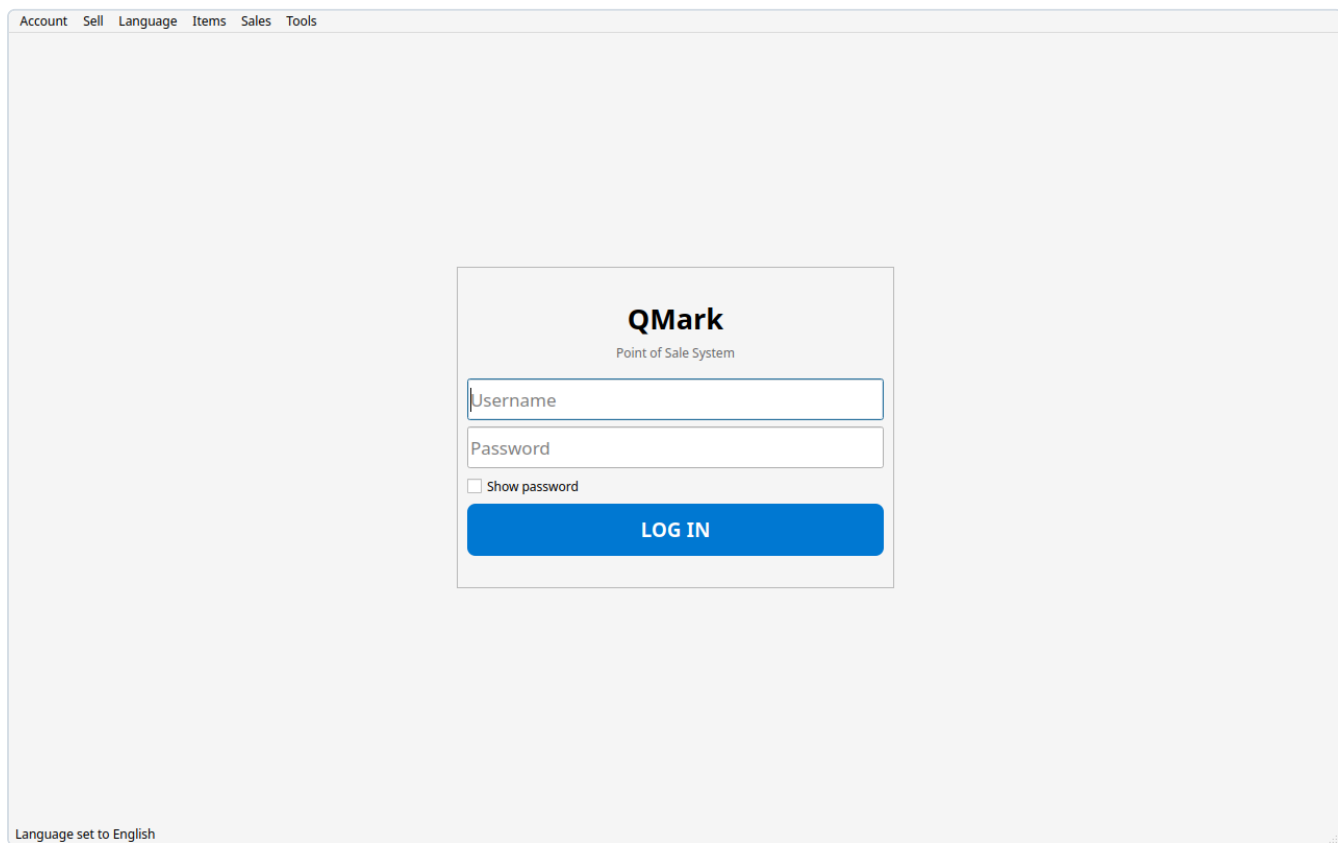

Figure 1-1: The QMark login screen — enter your username and password.

1. Type your username (as given by your administrator).
2. Type your password.
3. Tick **Show password** if you want to check what you typed.
4. Click **LOG IN**.

If you type the wrong username or password, QMark shows “*Invalid username or password*” — it never tells you which one was wrong.

1.3 After You Log In

As a Clerk you land **directly on the Sell page** (the cash register screen). This is the only page you need.

1.4 Changing the Interface Language

The **Language** menu is available to everyone. To switch between English and Polish:

1. Open the menu **Language** (Język).
2. Choose **English** or **Polski**.

The whole interface switches immediately — including menus, buttons and dates.

1.5 Logging Out and Exiting

- **Log out** — open the **Account** (Konto) menu and choose **Log Out** (Wyloguj się). The program returns to the login screen so the next operator can start their shift.
- **Exit** — choose **Exit** (Wyjdź) in the same menu to close the program completely.

Good practice: always log out (or lock the screen) when you leave the till, so other people cannot sell items under your name.

Chapter 2 — The Sell Page (Point of Sale)

The Sell page is your main working screen. It consists of three areas:

Area	What it does
Search box (top)	Filters the item grid as you type — live.
Item grid (middle)	Product cards with name, price, stock and a big SELL button.
Sales log (bottom)	The most recent sales of this shop, newest first.

The grid automatically fits as many cards per row as your screen width allows, so it works just as well on a tablet as on a desktop monitor.

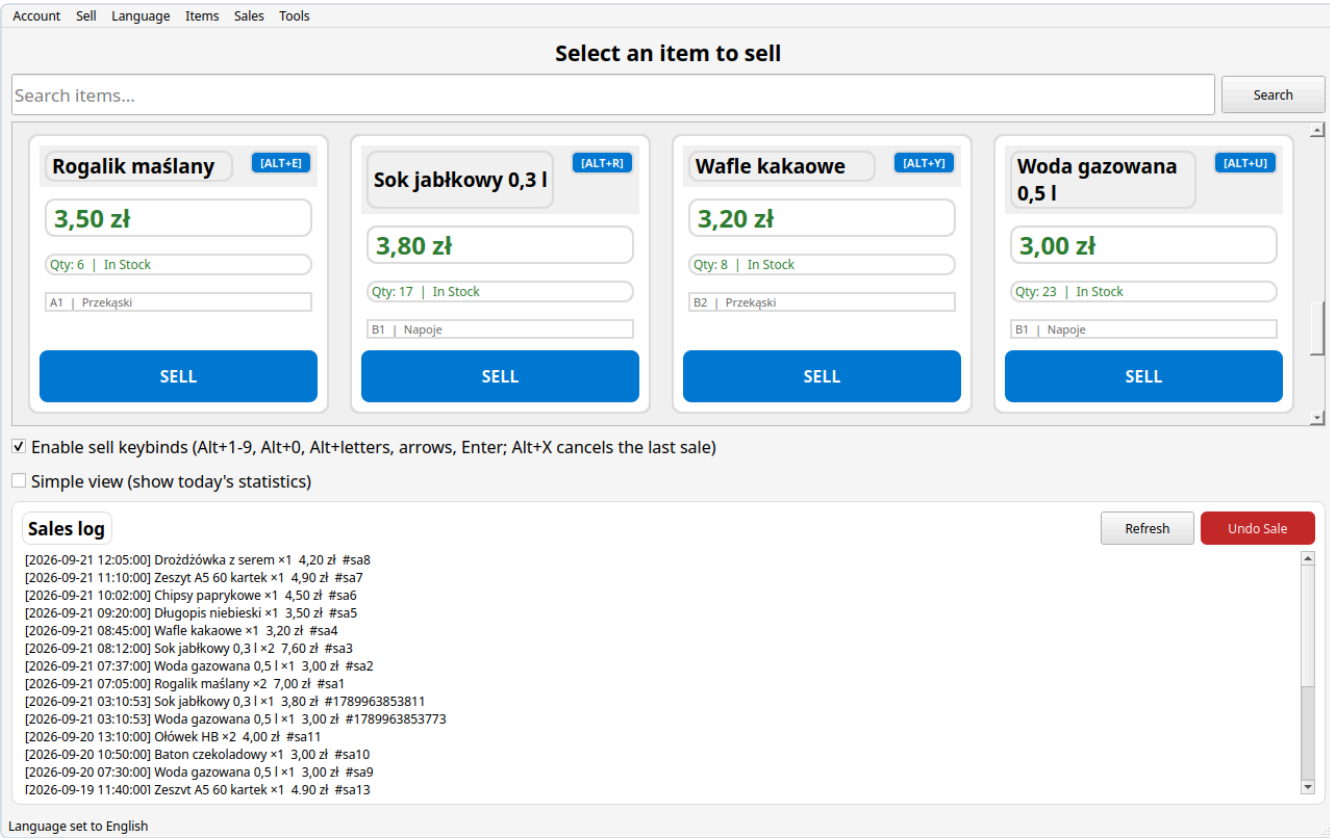

Figure 2-1: The Sell page — the till you work on all day.

2.1 Reading an Item Card

Each card shows:

- **Item name** — top-left.
- **Price** — large, green.
- **Quantity and status** — with a colour code:
 - green — **In Stock**
 - orange — **Low Stock**

- red — **Out of Stock / Sold Out**
- **Shelf and category** — small grey line (e.g. A1 | Snacks).
- **SELL button** — big, touch-friendly. The button is **disabled (greyed out)** when the item is out of stock or sold out.

The status colours are there to help you: if a card's quantity line turns orange or red, be careful — the item may not be available much longer.

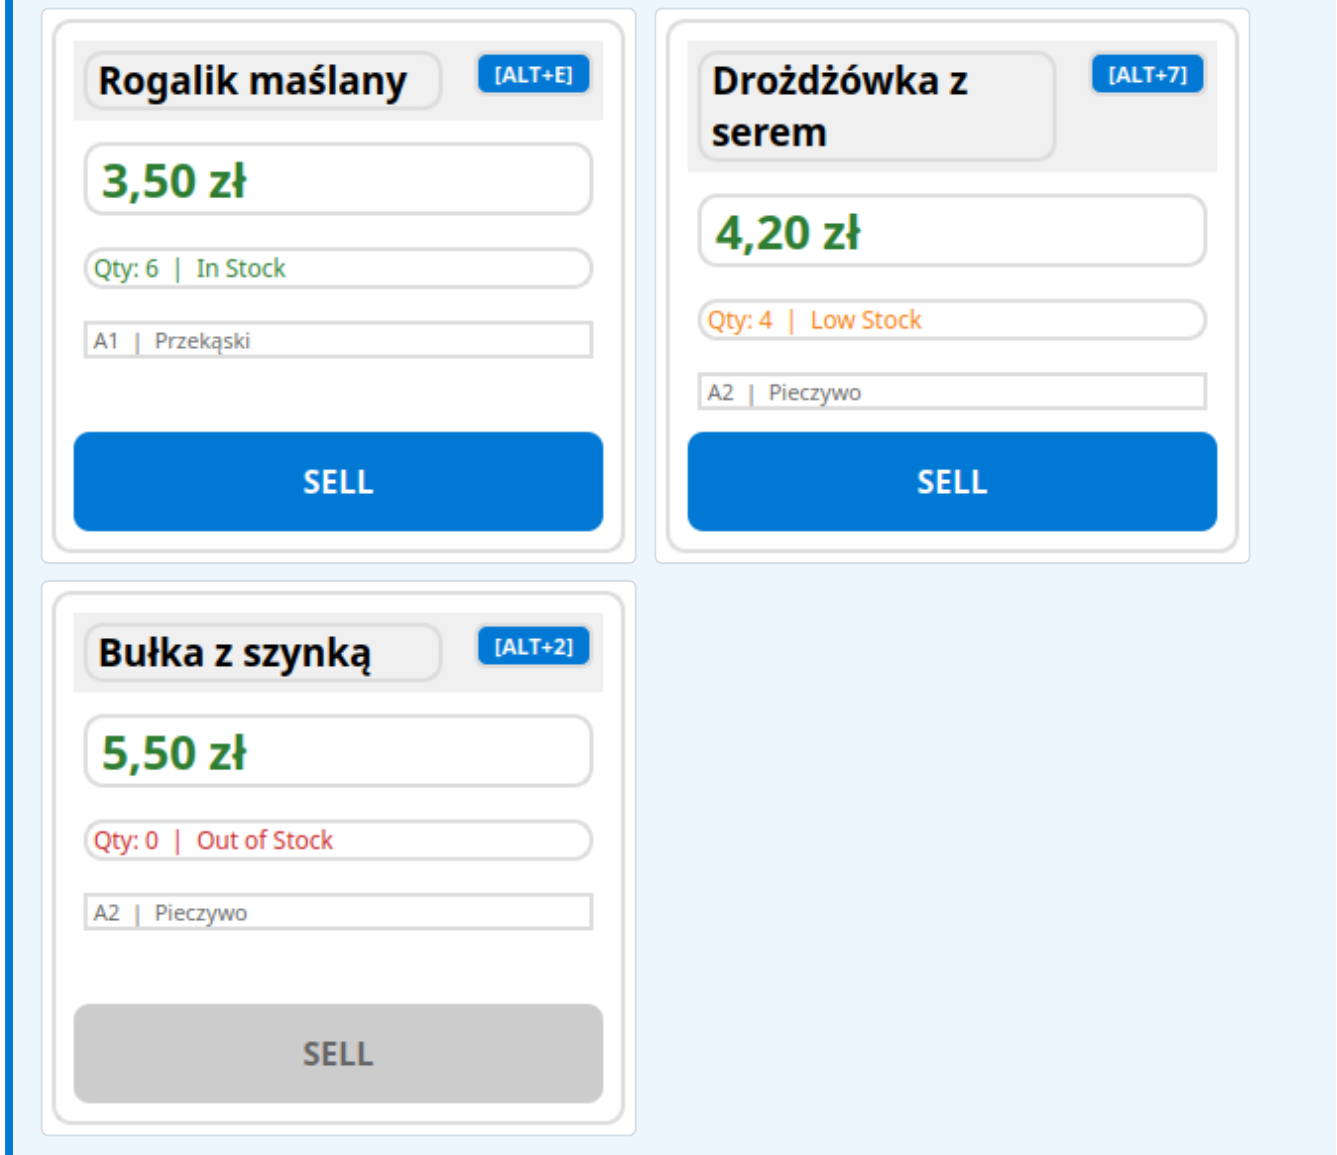

Figure 2-2: The three card states — In Stock (green), Low Stock (orange), Out of Stock (red, SELL disabled).

2.2 Searching for Items

Type in the search box and the grid updates instantly while you type. Clear the box to see all items again.

You do **not** need to press Enter — results appear as you type.

Language set to English

Figure 2-3: Typing in the search box filters the grid instantly.

Chapter 3 — Selling Items

3.1 Selling with the SELL button

1. Find the item in the grid (use the search box if needed).
2. Tap the **SELL** button on its card.

That's it — the item is sold, the stock is decreased by one, the sale is written to the sales log, and the grid refreshes automatically. **One click = one unit.**

No confirmation pop-up. The sale happens immediately — that is intentional, because the till must stay fast. If you make a mistake, undo the sale (Chapter 4).

3.2 Selling with the Keyboard (keybinds)

When **Enable sell keybinds** is ticked (it is on by default), you can sell without touching the screen:

Keys	Action
Alt + 1 ... Alt + 9, Alt + 0	Sell the 1st...10th card in the grid
Alt + letters (q, w, e, r, t, ...)	Sell cards after the first ten, in alphabetical order
← ↑ ↓ → (arrow keys)	Move the highlighted card
Enter	Sell the highlighted card
Alt + X	Cancel/undo the <i>last</i> sale (see Chapter 4)

Each card shows its key-binding badge (e.g. **Alt+1**) in the top-right corner.

The screen letters that are taken by the menus (for example the menu initial letters) are skipped automatically, so the combinations never clash. Gaps in the badges are normal.

3.3 When an Item Is Out of Stock

If stock is **0** or the item is marked **Sold Out**, the SELL button is disabled and you cannot sell it. If you try to sell via a keybind or scanner, QMark tells you “*This item is out of stock.*” — tell your administrator so they can restock it.

3.4 Using a Barcode Scanner

If your shop has a USB/HID barcode scanner and your administrator has turned on **scanner mode**, you can sell simply by scanning:

1. Make sure you are on the Sell page and logged in.
2. Point the scanner at the product's barcode.

3. QMark detects the scan burst (fast keyboard-like input + Enter) and **sells the item automatically**, showing *"Sold via scanner: [item name]"* in the status bar.

The scanned code is matched against the item ID first, then the name. If the code matches nothing, QMark reports *"Scanned code not found"* and nothing is sold.

Chapter 4 — Sales Log and Undoing a Sale

4.1 The Sales Log

The sales log at the bottom of the Sell page lists recent sales, newest first, in the form:

```
[2026-09-21 09:15:32] Croissant x1 3,50 zł #1729...
```

Each line shows the date and time, the item name and quantity, the total, and the sale number.

- **Refresh** — reloads the list (use it if the screen seems out of date).
- **Simple view** — hides the log and shows today's statistics instead (see 4.3).

4.2 Undoing a Sale

Sold the wrong item? No problem:

1. In the sales log, click the sale you want to cancel (it becomes highlighted).
2. Click **Undo Sale**.

If you did **not** select a sale, QMark cancels the **most recent** one.

Undoing a sale:

- restores the item's stock (the quantity increases back);
- updates the item's status (e.g. back from "Out of Stock" to "In Stock");
- removes the sale from the log.

You can also press **Alt + X** on the Sell page to quickly cancel the last sale.

4.3 Simple View — Today's Statistics

Tick **Simple view** to replace the sales log with a compact summary of **today**:

- **Sales** — number of transactions today,
- **Revenue** — how much was taken today,
- **Items sold** — how many units left the shelf today,
- per-product lines such as `3× Croissant 10,50 zł` (up to 15 lines).

Untick the box to return to the sales log.

Chapter 5 — Your Daily Workflow: Tips

1. **Log in** at the start of your shift, **log out** at the end.
2. Find items quickly with the **search box** — no scrolling needed.
3. Use **Alt + digits/letters** when there is a queue — it is the fastest way to sell.
4. Keep an eye on the **status colours**; if a product is on its last units, mention it to the administrator.
5. If you sell the wrong item, **undo it immediately** (select it in the log and press **Undo Sale**, or press **Alt + X**).
6. If something looks wrong (a price is missing, an item does not sell), tell your administrator — fixing items, prices and stock is their job.

What a Clerk cannot do

As a Clerk your menus are limited to **Sell**, **Language** and **Account**. The **Items**, **Sales** and **Tools** menus are not shown to you. If you try to open a restricted feature, QMark shows an **“Access Denied”** message. This is normal — ask your administrator (SuperAdmin) when you need something changed.

Chapter 6 — Quick Reference

6.1 Keyboard shortcuts on the Sell page

Key	Action
Alt + 1...9, Alt + 0	Sell the matching card (first ten)
Alt + letters	Sell cards 11+, alphabetical
Arrow keys	Move the highlight
Enter	Sell highlighted card
Alt + X	Undo the last sale

6.2 Glossary

Term	Meaning
Clerk	Your role — can sell, view the sales log and undo sales.
Item	A product you sell (name, quantity, price, category, shelf).
Stock / Quantity	How many units are left.
Status	In Stock / Low Stock / Out of Stock / Sold Out.
Category	A group of items (e.g. Snacks, Drinks).
Shelf	Where an item physically stands in the shop (e.g. A1, B2).
Sale	One transaction — one click sells one unit.
POS	Point of Sale — the Sell page.

6.3 Where to find help

- This guide for everyday operations.
- The **QMark — SuperAdmin Guide** for everything related to setup, accounts, stock and reports — ask your administrator to consult it.
- The built-in **Troubleshoot** page (Tools menu, admin-only) can test the database and export diagnostics if a problem ever appears.

Thank you for using QMark!
